COURSE HIGHLIGHTS

- Review of surgical approaches and operative techniques pertaining to surgical treatment of skull base lesions such as skull base tumors, cerebral aneurysms, and other disorders
- Combines both microscopic and endoscopic techniques with a simulated microanastomosis training session to improve microsurgical skills
- Intensive hands-on cadaver dissection sessions, covering a broad spectrum of transcranial approaches
- Participants work in teams on prepared injected fixed specimens under the guidance of a distinguished expert faculty

TARGET AUDIENCE

This course is designed for neurosurgery medical providers including residents, fellows, attendings, nurse practitioners and physician assistants.

LEARNING OBJECTIVES

Upon conclusion of this program, participants should be able to:

- Identify the major skull base approaches to various neurosurgical and vascular disorders affecting the skull base and brain
- Review the appropriate approaches and microsurgical techniques for treatment of complex neurosurgical disorders
- Review complex surgical approaches for pretemporal, cavernous sinus and far lateral approaches
- Gain proficiency in surgical techniques during hands-on sessions on cadaver dissection
